 Problem solving is an essential part of every scientific discipline. It has two components: (1) problem identification and formulation, and (2) the solution to the formulated problem. One can solve a problem on its own using ad hoc techniques or by following techniques that have produced efficient solutions to similar problems.

Sometimes, several techniques need to be combined, and there are algorithms that are hard to pinpoint as applications of the known design techniques. Even when a particular design technique is applicable, getting an algorithm often requires a nontrivial ingenuity on the part of the algorithm designer.

Fundamentals of Algorithmic Problem Solving

Selecting a proper designing technique for a parallel algorithm is the most difficult and important task. Most of the parallel programming problems may have more than one solution. In this chapter, we will discuss the following designing

techniques for parallel algorithms – Divide and conquer; Greedy Method; Dynamic Programming; Backtracking; Branch & Bound

Parallel Algorithm - Design Techniques - Tutorialspoint

Divide and conquer approach supports parallelism as sub-problems are independent. Hence, an algorithm, which is designed using this technique, can run on the multiprocessor system or in different machines simultaneously. In this approach, most of the algorithms are designed using recursion, hence memory management is very high.

DAA - Divide & Conquer -

Tutorialspoint

There are several broadly recognized algorithmic techniques that offer a proven method or process for designing and constructing algorithms. Different techniques may be used depending on the objective, which may include searching, sorting, mathematical optimization, constraint satisfaction, categorization, analysis, and prediction.

Algorithmic technique - Wikipedia

Section three discusses the various design techniques namely, divide and conquer,

greedy approach, dynamic approach, backtracking, branch and bound and randomized algorithms used for solving problems in separate chapters.
