Light - Light - Reflection and refraction: Light rays change direction when they reflect off a surface, move from one transparent medium into another, or travel through a medium whose composition is continuously changing. The law of reflection states that, on reflection from a smooth surface, the angle of the reflected ray is equal to the angle of the incident ray.

When light travels from one medium to another (like air to glass, or glass to water), it does three

things. Some of it bounces off, some of it goes through, and the rest of it is absorbed. In this chapter, we will explore the first two. We will explore what rules govern them, their technical names and then apply these rules to study the beautiful world of curved mirrors and lenses.

All surfaces reflect. Wrong Track: You only get reflection of light with mirrors. Right Lines: Reflection of light occurs at any surface, such that the angle of incidence is equal to the angle of reflection, and not just mirrors. Starting with mirrors. Thinking about the learning. Many pupils come to associate reflection and the law of reflection of light solely with the action of plane mirrors.

Reflection and refraction - Teaching and learning issues ...

Reflection and Refraction . Our study of geometrical optics will center on the application of two basic laws: one for reflection and one for refraction. Reflection is just as you might imagine: rays of light

that are deflected by a surface (perhaps being sent back toward their source) are reflected. If you've ever looked in a mirror, you've looked at light that has been reflected by a surface (the mirror).
