A subset E of a bitopological space $(X, \mathcal{F}, \mathcal{G})$ will be called connected iff the space $(E, \mathcal{F}|_E, \mathcal{G}|_E)$ is connected. Especial case of connectedness in bitopological spaces

The notion of pairwise 0 connectedness for bitopological spaces have been introduced and studied by Sen [12]. On the other hand, motivated by the fact that there are some non-symmetric fuzzy topological structures, Kubiak [4] introduced the bitopological aspects [3] in the theory of fuzzy topological spaces.

The intersection of any finite number of members of τ still belongs to τ .; The elements of τ are called open sets and the collection ...
