### An Exponential Family Of Probability

In probability and statistics, an exponential family is a parametric set of probability distributions of a certain form, specified below. This special form is chosen for mathematical convenience, based on some useful algebraic properties, as well as for generality, as exponential families are in a sense very natural sets of distributions to consider.

In probability theory and statistics, the exponential distribution is the probability distribution of the time between events in a Poisson point process, i.e., a process in which events occur continuously and independently at a constant average rate. It is a particular case of the gamma distribution. It is the continuous

analogue of the geometric distribution, and it has the key property of being memoryless. In addition to being used for the analysis of Poisson point processes it is found in var

### Exponential distribution - Wikipedia

In the exponential family world, there are approximate distributional results (i.e. deviance tests). In the general setting, we can only appeal to asymptotics. A one-parameter exponential family,  $F$  is a one-parameter family of distributions of the form  $P(dx) = \exp(\eta(x)T(\theta))P_0(dx)$  for some probability measure  $P_0$ . The parameter is called the natural or canonical parameter
