Aspnet Mvc Application Architecture Guidelines

Let's understand the MVC architecture supported in ASP.NET. MVC stands for Model, View, and Controller. MVC separates an application into three components - Model, View, and Controller. Model: Model represents the shape of the data. A class in C# is used to describe a model. Model objects store data retrieved from the database. Model represents the data. View: View in MVC is a user interface. View displays model data to the user and also enables them to modify them.
