Confluent hypergeometric functions - Ghent University Library

In mathematics, a confluent hypergeometric function is a solution of

a confluent hypergeometric equation, which is a degenerate form of a hypergeometric differential equation where two of the three regular singularities merge into an irregular singularity. The term confluent refers to the merging of singular points of families of differential equations; confluere is Latin for "to flow together".

The confluent hypergeometric function is a degenerate form of the Hypergeometric Function which arises as a solution to the Confluent Hypergeometric Differential Equation. It is commonly denoted ${}_1F_1$, or M , and is also known as Kummer's Function of the first kind. An alternate form of the solution to the Confluent Hypergeometric Differential Equation is known as the Whittaker Function.

Confluent Hypergeometric Function of the First Kind

The generalized Gauss function is also used in mathematical statistics and the basic analogues of the Gauss functions have applications in the field of number theory. Dr Slater's treatment leads on from a discussion of the Gauss functions to the basic hypergeometric functions, the hypergeometric integrals, bilateral series and Appel series.
