Buoyant Force And Archimedes Principle

Archimedes' principle states that the upthrust or buoyant force on an object in a fluid is equal to the weight of the displaced fluid. Displaced means pushed out of the way, so for instance when you drop stones into a container of water, you displace the water and it rises in the container. A force can be thought of as a push or pull.

above statement is known as Archimedes Principle" and it is one of the founding principles of Hydrostatics. Mathematically, we can write the Archimedes principle as

Physics Tutorial: Buoyancy. Archimedes' Principle

Archimedes Principle: This principle states that when an object is immersed in a fluid (liquid or gas), whether fully or partially (a part of it) submerged, it experiences an upward buoyant force which is equal to the weight of the fluid that the body displaces which acts in the upward direction and at the center of mass of the fluid displaced by it.

Archimedes' Principle | Boundless Physics

Archimedes' principle, physical law of buoyancy, discovered

by the ancient Greek mathematician and inventor Archimedes, stating that any body completely or partially submerged in a fluid (gas or liquid) at rest is acted upon by an upward, or buoyant, force, the magnitude of which is equal to the weight of the fluid displaced by the body. The volume of displaced fluid is equivalent to the volume of an object fully immersed in a fluid or to that fraction of the volume below the surface for ...

Archimedes' principle | Description & Facts | Britannica

Archimedes' principle states that the upward buoyant force that is exerted on a body immersed in a fluid, whether fully or

partially, is proportional to the weight of the fluid that the body displaces. Archimedes' principle is a law of physics fundamental to fluid mechanics. It was formulated by Archimedes of Syracuse.
