The movement of the piston contained inside the cylinder operates the brakes through links called "rigging". The rigging applies the blocks to the wheels. Some modern systems use disc brakes. The piston inside the brake cylinder moves in accordance with the change in air pressure in the cylinder.

Brakes | The Railway Technical Website | PRC Rail ...

A railway brake is a type of brake used on the cars of railway trains to enable deceleration, control acceleration or to keep them immobile when parked. While the basic principle is similar to that on road vehicle usage, operational features are more complex because of the need to control multiple linked carriages and to be effective on vehicles left without a prime mover. Clasp brakes are one type of brakes historically used on trains.

Air Brake and Train Handling Rules - Progress Through Unity

The Westinghouse Automatic Air Brake was one of the most important improvements in railroad safety during the industry's early years. Developed by George Westinghouse in the 1860s, just after the Civil War, it also offered more efficient operations since brakemen no longer had to engage in the dangerous, tedious task of navigating the catwalks and setting brakes manually.
