CRAN Task View: High-Performance and Parallel Computing with R. This CRAN task view contains a list of packages, grouped by topic, that are useful for high-performance computing (HPC) with R. In this context, we are defining 'high-performance computing' rather loosely as just about anything related to pushing

R a little further: using compiled code, parallel computing (in both explicit and implicit modes), working with large objects as well as profiling.

CRAN Task View: High-Performance and Parallel Computing with R

When we load and run an R program, the R code is first loaded into RAM. The R interpreter then translates the R code into machine code and loads the machine code into the CPU. The CPU executes the program. The program loads the data to be processed from the hard disk into RAM (`read.csv()` in the example). The data is loaded in small chunks into the CPU for processing.
