The force experienced by a test charge, q_0 , in such an electric field is $F = q_0 E$. Electric field lines begin at positive charges (+) and end on negative charges (-). The magnitude (strength) and direction (orientation) of the E field is observed with a positive "test charge" represented by the quantity q_0 .

E 1 is the electric field at P field due to q 1. E 2 is the electric field at P field due to q 2. We can find the net field by vectorially adding these two vectors. Since the two electric field vectors are equal in magnitude and opposite in direction, they cancel each other out so the net field at P is zero. Note: An electric field exists in the region of space around a charged object if there is another charged
