Description. Millimeter wave wireless communications is the next breakthrough frontier for wireless networks in the mobile cellular industry, and for emerging wireless local area networks, personal area networks, and vehicular communications. Completely new products, systems, theories, and devices will be created to deliver mobile data rates of many Gigabits per second, thousands of times greater than today’s cellular and WiFi networks.

Millimeter Wave Wireless Communications - Pearson

ABSTRACT. Millimeter-wave (mmWave) technology is emerging as the most promising solution to meet the multi-fold demand increase for mobile data. Very short wavelength, high directionality, together with sensitivity to rampant blockages and mobility, however, render state-of-the-art mmWave technologies unsuitable for ubiquitous wireless coverage. In this work, we design and implement UbiG - a mmWave wireless access network - that can deliver ubiquitous gigabits per second wireless access ...

Metrics details. Abstract. The introduction of 5G’s millimeter wave transmissions brings a new paradigm to wireless communications. Whereas physical obstacles were mostly associated with

signal attenuation, their presence now adds complex, non-linear phenomena, including reflections and scattering. The result is a multipath propagation environment, shaped by the obstacles encountered, indicating a strong presence of hidden spatial information within the received signal.
