Atypicality: Second-/Third-Generation Antipsychotics. While Meltzer et al. defined atypicality as absence of notable EPS at therapeutic doses (Meltzer et al. 2003), evidence clearly indicates that the newer antipsychotics are not the same in this regard. For example, risperidone has been identified as having a greater liability for EPS than many other atypical agents, a risk that is dose dependent – this also distinguishes it from other atypicals such as clozapine and quetiapine.

Second- and Third-Generation Antipsychotics | SpringerLink

The distinction between second and third generation antipsychotics has been made based on mechanistic differences. Specifically, aripipazole is the first approved antipsychotic that is a partial dopamine agonist and, as such, has been designated a third generation antipsychotic. This presumes that all other atypical compounds to this point, including clozapine, share some common attribute(s) pharmacologically that account for their unique clinical...
