Global warming is a solvable environmental problem, because solutions rest with how human beings will produce electricity and other forms of power in the future. Renewable energy sources such as

wind, solar, and nuclear power have become increasingly reliable, and they do not give off carbon dioxide and other greenhouse gases.

Global Warming | Saving Earth | Encyclopedia Britannica

The global warming controversy concerns the public debate over whether global warming is occurring, how much has occurred in modern times, what has caused it, what its effects will be, whether any action can or should be taken to curb it, and if so what that action should be. In the scientific literature, there is a strong consensus that global surface temperatures have increased in recent ...

Global warming controversy - Wikipedia

Climate change, periodic modification of Earth 's climate brought about as a result of changes in the atmosphere as well as interactions between the atmosphere and various other geologic, chemical, biological, and geographic factors within the Earth system.

climate change | Causes, Effects, & Facts | Britannica

The long-term distribution of heat and precipitation on Earth ' s surface is called global climate. Heat from the sun keeps the Earth ' s average temperature at about 60 ° F (16 ° C), within a range that allows for biological life and maintains the planet ' s life-sustaining reservoirs of liquid water.

Global Climate | Encyclopedia.com

To understand global warming, it helps to understand the greenhouse effect. A greenhouse is a glass house where plants grow. Glass lets light in and keeps heat from escaping. This trapped heat keeps the plants warm even when it is cold outside. Likewise, Earth's atmosphere traps energy from the Sun. Carbon dioxide and other gases—called greenhouse gases—in the air do this trapping.
