Let X be any random variable with finite expected value and variance. Then for

every positive real number a , $P(|X - E(X)| \geq a) \leq \frac{\text{Var}(X)}{a^2}$. There is a direct proof of this inequality in Grinstead and Snell (p. 305) but we can also prove it using Markov's inequality! Proof. Let $Y = (X - E(X))^2$. Then Y is a non-negative valued random variable with

The variance is measure of spread for a distribution of a random variable. Moreover, it determines the degree to which the values of a random variable differ from the expected value. Generally, it shows how spread are the outcomes. The variance of a random variable X is the expected value of the squared deviation from the expected value of X .

Expected Value of a Function of a Continuous Random Variable Remember the law of the unconscious statistician (LOTUS) for discrete random variables: $E[g(X)] = \sum_{x_k \in R_X} g(x_k) P_X(x_k)$ Now, by changing the sum to integral and changing the PMF to PDF we will obtain the similar formula for continuous random variables.

Let X be a numerically valued random variable with expected value $\mu = E(X)$. Then the variance of X , denoted by $V(X)$, is $V(X) = E((X - \mu)^2)$. Note that, by Theorem 6.1.1, $V(X)$ is given by $V(X) = \sum x(x - \mu)^2 m(x)$, where m is the distribution function of X .

In probability theory, the expected value of a random variable, denoted $E(X)$ or μ , is a generalization of the weighted average, and is intuitively the arithmetic mean of a large number of independent realizations of X . The expected value is also known as the expectation, mathematical expectation, mean, average, or first moment. Expected value is a key concept in economics, finance, and many other ...

Variance is a measure of the difference from the expected value (see image). A high variance means that you get steeper drawdowns. But it goes both ways as you will also see higher upswings. As long as you understand the concept of value betting and can handle the variance, there is no right or wrong in terms of approach.
