Fatigue Assessment Of Riveted Railway

a typical riveted
 railway bridge, under
 present-day and
 historical train loading,

is carried out in order
 to obtain stress
 histories appropriate
 for fatigue assessment.
 The fatigue criticality
 of the various riveted
 connections of the
 bridge is investigated
 by ranking them with
 respect to their fatigue
 damage. The latter is
 calculated based on
 three different fatigue
 detail classifications
 and taking into account
 dynamic amplification.

Fatigue assessment of riveted railway bridges | University ...

This paper presents an overview of recent research efforts by the authors and co-workers on the fatigue assessment of old metallic railway bridges. The investigation focuses on the behaviour of riveted stringer-to-cross-girder connections in a typical, short-span bridge. A generic methodology, which is based on nominal stresses and the S-N method, is presented first, followed by a more detailed analysis using a recently developed fatigue

assessment theory, which is based on local stress ...

Abstract. The purpose of this paper is to present fatigue-related results obtained from finite element analyses of a typical riveted railway bridge. The first part of the paper deals with past case studies related to the fatigue assessment of various riveted railway bridges. The second part of the paper presents the results obtained from the finite element analyses of the wrought-iron bridge under typical present-day and assumed historical train loadings.

Abstract. As some of

the older riveted railway bridges are close to or have even exceeded their theoretical fatigue lives, it is desirable to develop a comprehensive fatigue assessment methodology for fatigue-critical details. The aim of this study was to present damage and fatigue life estimates for the riveted connections of a typical riveted UK railway bridge through finite-element analyses.

A number of fatigue assessment methodologies for riveted railway bridges have been proposed in the past , , some being of probabilistic form , , . The proposed probabilistic approaches seek the probability of failure or the reliability index, being inherent the comparison of the

probabilistic fatigue strength data with the probabilistic fatigue loading.

A system-based model for fatigue assessment of riveted railway bridge connections, comprising a number of basic components, is presented in this article. Probabilistic fatigue load spectra are developed through Monte Carlo simulation of train passages over a finite element model of a typical, short-span bridge.

A large number of metallic railway bridges currently in use in the UK are of riveted construction and are

close to 100 years old. A fatigue assessment methodology is needed for such bridges since these may be close to the end of their fatigue lives.

Fatigue assessment of riveted bridges IV By gathering information from bridges where the material properties have been determined a data base was created. From the

information in the data base a better prediction concerning the properties to expect in steel bridges constructed before the 1940's is obtained.

Fatigue assessment of riveted bridges - SBUF

This dissertation, which focuses on the fatigue life of riveted steel

railway bridges, is based on: - A series of full-scale fatigue tests of nine riveted stringers taken from a railway bridge built in 1896. A review of and comparison with the different full-scale fatigue tests on riveted railway bridge members, which have been conducted in other laboratories over the years, is also given.
