Importance Sampling Srinivasan Rajan - bitofnews.com

Importance sampling is concerned with the determination and use of an alternate density function (for X), usually referred to as a biasing density, for the simulation experiment. This density allows the event to occur more frequently, so the sequence lengths K gets smaller for a given estimator variance.

Importance sampling for characterizing STAP detectors - CORE

Importance sampling is a variance reduction technique that can be used in the Monte Carlo method. The idea behind importance sampling is that certain values of the input random variables in a simulation have more impact on the parameter being estimated than others.

Importance sampling - Wikipedia

Abstract. A large part of IS research has been concerned with the search for good simulation densities, or those that approach the optimal. Most of the suggested biasing schemes in use are motivated by the requirement that for tail probability estimation, the biasing density should effect an increase in the event probability as compared to the original density.
