This water damaged
ECU is a very common
failure for Peugeot 206
& 207 vehicles built
between 2005 and
2011, the common
issue is coolant
contamination into the
wiring harness that
travels via 'capillary

action' up to the plug of the ECU, once the water from the coolant system reaches the ECU it causes the ECU terminals to corrode causing open circuits for various sensors and actuators, this results in host of running problems for the engine.

The BSI is the Built-In Systems Interface. It's kind of like an ECU for all other electrical systems other than the engine, but it is connected to the engine ECU via a CANBUS interface. It's a right royal pain in the arse when it goes wrong. 5.3K views
