Load balancing Microsoft IIS - Loadbalancer.org

Network load balancing (NLB) in Windows Server® 2008 provides traffic distribution using TCP/IP and can be used with the IIS shared configuration feature to create a Web farm that provides redundancy and fault-tolerance. NLB works by balancing traffic between the nodes in a Web farm or cluster.

Network Load Balancing | Microsoft Docs

In IIS Manager, select the server farm, myServerFarm. The following icons are

shown: Double-click Health Test. Enter `http://(server name or FQDN of ARR server)/healthCheck.txt` as the URL value. Enter healthy as the Response match value. Response match is an optional test to make sure that the body of the response contains the expected string.

HTTP Load Balancing using Application Request Routing ...

Problem If you have a lot of IIS servers, and want to load balance between them, then you can either buy a load balancer, or use Microsoft ARR (Application Request Routing). Note: ARR does a lot more than simply load balancing, e.g. it can perform caching, and complex web routing, and even SSL offloading.

Load Balance IIS with Microsoft ARR | PeteNetLive

And IIS and ARR are installed on your load balancing server. It is time to configure ARR and turn your servers into a functioning web farm. When you are done with these tasks, record your design decisions before going on to Step 4: Configure SSL Central Certificate Store. 3.1.

Configuring Step 3: Configure IIS Web Farm Load Balancing

...

The primary function of the load balancer is to distribute inbound requests across multiple IIS servers. This allows administrators to configure multiple servers and easily share the load between them.

Load Balancing Microsoft IIS

Manage and configure multiple NLB clusters and the cluster hosts from a single computer by using NLB Manager or the Network Load Balancing (NLB) Cmdlets in Windows PowerShell. Specify the load balancing behavior for a single IP port or group of ports by using port management rules. Define different port rules for each website. If you use the same set of load-balanced servers for multiple applications or websites, port rules are based on the destination virtual IP address (using virtual ...

IIS Load Balancing : The Official Microsoft IIS Forums

In an ideal world I would like 2 load balancers to sit in front of 2 IIS servers (this is so that if a load balancer goes down, traffic will still get directed to the 2 IIS servers, and if an IIS server goes down, the other will accept traffic). I had looked at using Microsoft NLB, but it doesn't look like

it will support what I want to do.

IIS and Load balancing - Windows Server - Spiceworks

Aria load balancing for Microsoft IIS web servers intelligently and monitors their health in amazing detail. Aria is a full Layer 7 HTTP/S load balancer with rulesets, SSL acceleration, advanced health checking and much more. It's also a full ADC package, which includes our Web Accelerator and Web Application Firewall.

IIS Load Balancing | IIS 8 Server Load Balancing & High ...

To answer Dmitry's question: web gardens don't support any customization of the load balancing algorithm for neither

IIS6 nor IIS7. There is a hardcoded client connection affinity to a worker process instance. So for a given client TCP connection all the HTTP requests will be handled by the same instance of the worker process.

Web garden load balancing : The Official Microsoft IIS Forums

i want to load balance the traffic on FTP server and i want to know is it possible to work this ftp Server ACTIVE/ACTIVE load balancing ? and if yes if a user open a file on ftp server 1 and at the same time another user open same file on ftp server 2 and they modify that file and save that file what will be happen?does the saved file lost? wich modified section will be

lost?

Load Balancing FTP server : The Official Microsoft IIS Forums

In this post, I will be using a load balanced IIS web farm as the example, but the principal applies for other applications. The Basics: As you may know, Kerberos relies on Service Principal Names (SPNs) . SPNs are associated with objects in Active Directory and registered under the servicePrincipalName attribute .

Kerberos and Load Balancing - Microsoft Tech Community

Our general recommendation for achieving high-availability of Internet Information Services (IIS) servers is by using

Network Load Balancing (NLB) since the servers tend to be hosts for stateless requests – a customer will visit a website, access content, then leave, and it doesn't matter which server hosts the website.
