Experiment 2: Conservation of Momentum

This loss of system momentum must be compared to the total system momentum of $10\,000\text{ kg}\cdot\text{m/s}$. In this very realistic case, friction would cause no more than a 2% loss of total system momentum. If the collision being analyzed involved objects with even greater speeds, the percent loss of total system momentum would be considerably less."

In equation form, the conservation of momentum principle for an isolated system is written $p_{\text{tot}} = \text{constant}$, or $p_{\text{tot}} = p'_{\text{tot}}$, where p_{tot} is the total momentum (the sum of the momenta of the individual objects in the system) and p'_{tot} is the total momentum some time later. (The total momentum can be shown to be the momentum of the center of mass of the system.)

One of the most powerful laws in physics is the law of momentum conservation. The law of momentum conservation can be stated as follows. For a collision occurring between object 1 and object 2

in an isolated system, the total momentum of the two objects before the collision is equal to the total momentum of the two objects after the collision. That is, the momentum lost by object 1 is equal to the momentum gained by object 2.
