You can read in the Handbook Reference on Variable Declarations more about how let and const fix a lot of the problems with var. About Number, String, Boolean, Symbol and Object. It can be tempting to think that the types Number, String, Boolean, Symbol, or Object are the same as the lowercase versions recommended above. These types do not refer to the language primitives however, and almost never should be used as a type.

TypeScript: Handbook - Basic Types

For some values, such as the primitives string and number, we can identify their type at runtime using the typeof operator. But for other things like functions, there’s no corresponding runtime mechanism to identify their types. For example, consider this function: `function fn (x) { return x.flip(); }`

TypeScript: Handbook - The Basics

The status of the different types of provisions is explained in the next section. The Handbook is made up of instruments made by the FCA Board to implement these provisions.
