#### The Definitive Guide to LED Accent Lighting : 9 Steps ...

The LED is a two terminal device. It is a special type of diode, which only allows electrical current to flow through it in one direction. When a current flows in this direction, light is emitted from the device. If the supply voltage is connected in the opposite direction, no current flows and no light is emitted.

#### LEDs, a beginner's guide.

LED bulbs differ from traditional incandescent bulbs in the way they produce light. While old-fashioned incandescent light bulbs passed electricity through a thin wire filament, LEDs produce light through the use of a semi-conductor that emits light energy when an electrical current is passed through it.

#### LED lights explained - Which?

While an incandescent bulb operates by heating its filament to a temperature that produces light, an LED bulb emits electromagnetic energy as light when electrified. By turning energy into light instead of heat (rather than using heat to generate light), LEDs are able to operate at a significantly lower temperature than other types of light bulbs.

**Advantages of LED Lights - The Lightbulb Co. UK**

LED grow lights can provide full spectrum light wavelengths which are suitable for vegetative and flowering stages of your grow. (No need to switch bulbs) LED grow lights produce 80% less heat making it easier to vent and climate control your grow area. LED grow lights can contain UV light which reduces pests, mold, and fungus.

A bulb’s beam angle tells you how wide or narrow its beam of light is. If you're using a downlight for accent lighting, or to highlight specific areas or objects in a room, then a narrow beam spread – between 20°-40° – would be best. A wider beam spread, between 100-120°, would be better suited for general purpose lighting.

In general, LED lights of 200-400W need to be positioned at 30-70cm from the plants while lights of 450-600w need the distance to be 50-80cm. Getting Your Grow Lights Right – Top Tips. Follow these expert tips and you’ll find that your grow lights are in the perfect position to maximize your crop and to ensure the best quality plants.

**Setting Up Your Cannabis Grow Lights - An Expert Guide**

If you are going to use 3w LED GU10 light bulbs, then the calculation is slightly different. The first downlight still needs to be around 0.8m from the wall but the spacing needs to be reduced to 1.3m – 1.7m apart in every direction. This increase in light fittings offsets the reduction in light output from the LED lamps.
