Ruby User Guide Regular Expressions

The common term for patterns that use this strange vocabulary is regular expressions. In ruby, as in

Perl, they are generally surrounded by forward slashes rather than double quotes. If you have never worked with regular expressions before, they probably look anything but regular, but you would be wise to spend some time getting familiar with them. They have an efficient expressive power that will save you headaches (and many lines of code) whenever you need to do pattern matching, searching ...

Ruby user's guide Regular expressions - Ruby-Doc.org ...

Ruby regular expressions (ruby regex for short) help you find specific patterns inside strings, with the intent of extracting data for further processing. Two common use cases for regular expressions include validation & parsing. For example: Think about an email address, with a ruby regex you can define what a valid email address looks like. In other words, your program will be able to tell the difference between a valid & invalid email address.

Ruby Regular Expressions (Complete Tutorial)

Ruby - Regular Expressions. A regular expression is a special sequence of characters that helps you match or find other strings or sets of strings using a specialized syntax held in a pattern. A regular expression literal is a pattern between slashes or between arbitrary delimiters followed by %r as follows -.

Ruby User Guide Regular Expressions | bookstorrent.my.id

Regular expressions (regexp s) are patterns which describe the contents of a string. They're used for testing whether a string contains a given pattern, or extracting the portions that match. They are created with the /pat/ and %r {pat} literals or the Regexp.new constructor. A regexp is usually delimited with forward slashes (/).

Class: Regexp (Ruby 2.5.1)

See: Ruby User's Guide Ruby Manual Regular expressions are patterns which can be matched against strings. The usual syntax is to surround them with slashes, which create a Regexp object, much as putting quoted characters create a String object.

Online Regex tester and visualizer - Python, PHP, Ruby ...

Tokens and groups. Tokens and groups are portions of a regular expression which can be followed by a quantifier to modify the number of consecutive matches. A token is a character, special character, character class, or range (e.g. [m-q]).A group is formed by enclosing tokens or other groups within parentheses. All of these can be modified to match a number of times by a quantifier.
