System On A Chip Verification

A system on a chip is an integrated circuit that integrates all or most components of a computer or other electronic system. These components almost always include a central processing unit, memory, input/output ports and secondary storage - all on a single substrate or microchip, the size of a coin. It may contain digital, analog, mixed-signal, and often radio frequency signal processing functions. Higher-performance SoCs are often paired with dedicated and physically separate memory and ...

System on a chip - Wikipedia

It claims to, as in DAC verification, but the verification of the trivial DAC is virtually analog-less. And even the digital system on a chip verification coverage seems rushed. I am an analog chip designer with 24 years experience, a good part of that time spent verifying my analog and mixed-signal designs.
