Veterinary Endodontics

The main workload of every-day veterinary dentistry is management of periodontal disease and its sequelae with some endodontics, and even orthodontics, thrown in on the side. This appears to be mainly due to what some would consider neglect of pet oral hygiene, especially when "toy breed" dogs such as the Pug are more susceptible to periodontal disease and have grown in popularity in recent years.

A story of Veterinary Endodontics - The Young Dentist
Endodontics, from the Greek endo (inside) and odons (tooth), is a specialist sub-field of dentistry that deals with the treatment of the tooth pulp and the tissues surrounding the apex of a tooth. In contrast to exodontia, endodontic treatment is aimed at the preservation of teeth affected with pulp or apical infection.

A story of Veterinary Endodontics
Endodontic Supplies Companion animal teeth are very different to human teeth and require longer length and more flexible files and instruments for endodontic procedures. The pod range of specialist products and instruments are designed to cover the special requirements of veterinary endodontic procedures.

Endodontic Supplies - Veterinary Dental Supplies
Sophisticated dental care for dogs and cats has been a growing trend in the United States and other countries since the mid-1970s. Treatment of the dental pulp, broadly termed endodontic therapy, is being performed by a rapidly growing number of general practitioners. Injuries of the Dental Pulp. Endodontic therapy is the treatment of the dental pulp.

Veterinary Endodontics - WSAVA2011 - VIN
It is not used in veterinary medicine as a cosmetic procedure, but is mainly used to preserve those teeth which we prefer not to remove. Some teeth, such as the maxillary and mandibular

canine teeth, the mandibular 1st molar and the maxillary 4th premolar, have both structural and functional significance, and extraction of these teeth usually requires a significant surgical procedure which can result in post operative discomfort.

New Forest Veterinary Dental Service - Endodontics

This 'endodontic system' is the hollow area inside the tooth containing blood vessels, nerves, and connective tissue. These make up the pulp tissue, which sustains the tooth through growth, maturity, and response to stress. The dental specialists at Dallas Veterinary Dentistry & Oral Surgery are skilled in endodontics and providing advanced treatments to preserve teeth after they have become damaged or abscessed.
