Morphological Observations By Electron Microscopy

ABSTRACT. The flagellated protozoan, *Giardia agilis*, was isolated from tadpole small intestine and examined by scanning electron microscopy and interference reflexion microscopy. The general morphology of the *G. agilis* trophozoite is similar to *G. muris* and *G. duodenalis*, but with modifications that

reflect its elongated form.

Mycelial and spore morphology of *Diplodia maydis* were investigated by using scanning electron microscopy after growth on various media and natural substrates (oat and corn kernels, and corn husks). Of several specimen preparation methods studied, Parducz fixation followed by critical-point or freeze-drying gave adequate preservation for pycnidia, mycelia, and spores.
