Asymmetrical Multiconnection Three Stage Clos

Abstract. In this paper, we study routing problems in a general class of asymmetrical three-stage Clos networks. This class covers many asymmetrical three-stage networks considered by earlier researchers. We derive necessary and sufficient conditions under which this class of networks is rearrangeable with respect to a set of multiconnections, i.e., connections between subsets of input and output terminals.

Asymmetrical Multiconnection Three Stage Clos Networks

Abstract. In this paper we study the switching performance of three-stage Clos networks. First, we consider an existing control algorithm for operating the asymmetrical Clos networks in the nonblocking mode, and we derive sufficient conditions under which these networks are nonblocking for this control algorithm.

Abstract. This paper studies the nonblocking switching operation of 3-stage Clos networks in the multirate environment. In particular, we concentrate on the strictly nonblocking mode of operation of these switching networks. Our analysis determines bounds for the minimum number of middle-stage switches required for strictly nonblocking operation. Several cases of the multirate environment are considered, including discrete and continuous bandwidth multirate traffic.
