Description A sunshine

recorder is a meteorological instrument used for recording the amount of sunlight that a particular location receives throughout a day. Inside the recorder's adjustable frame are two important pieces: a paper strip, and a glass sphere that can focus the sunlight ...

Sunshine Recorders An Overview Measuring The Weather

Sunshine hours (or, more correctly, hours of bright sunshine) is the traditional measure of the amount of sunshine that a location has received. For many years, sunshine hours was the only way in which the amount of sunshine could be monitored and recorded (by the

well-known Campbell-Stokes recorder, with its glass-sphere lens and burned-paper trace).

Instromet Sunshine Hours Sensor - Prodata Weather Systems

A rotating mirror is used to reflect sunlight onto the photosensor, and the occurrence of sunshine is detected by measuring the intensity of the light received. The rotating mirror sunshine recorder used by JMA has a mirror that rotates once every 30 seconds and a photosensor to receive the reflected sunlight.

Sunshine Recorders &
Sundials. The

Campbell-Stokes recorder utilises heat from the sun's rays, focused by a solid glass sphere to an intense spot, to char a trace on a sunshine card. Routinely mounted on a plinth, the Campbell-Stokes records the duration of bright sunshine in either hourly or daily totals. The recycled range of outdoor instruments are hand crafted in the UK and made from vending machine coffee cups direct from the national Save-A-Cup scheme.
