Refer to Cisco Technical Tips Conventions for more information on document conventions. BGP Case Studies 1 The BGP, which RFC 1771 defines, allows you to create loop-free interdomain routing between autonomous systems (ASs). An AS is a set of routers under a single technical administration.

BGP Case Studies - Cisco

Prior to IOS 12.0, Cisco was compliant with the then-current RFC 1583. As of IOS 12.0, Cisco changed the behavior of OSPF to be compliant with the new standard, RFC 2328. This situation created the possibility of sub-optimal routing if all of the ABRs in an area were not upgraded to the new code at the same time.

I recently completed a design and lab scenario that uses Cisco DMVPN as a backup to a primary MPLS WAN (I'm still planning the implementation). This design, combined with the requirements for multiple (more than two) hubs and the use of BGP in a single DMVPN cloud, was difficult to find neatly packaged on the Internet.
