Computational architectures integrating neural and ...

Main Text Introduction. Sensorimotor integration in the domain of speech processing is an exceptionally active area of research and can be summarized by two main ideas: (1) the auditory system is critically involved in the production of speech and (2) the motor system is critically involved in the perception of speech. Both ideas address the need for "parity," as Liberman and Mattingly put ...

This research has culminated with the development of an integrated cognitive architecture that can be used to provide a qualitative and quantitative explanation of empirical psychological learning data. The model, CLARION, is a hybrid neural network that can be used to simulate problem solving and social interactions as well. More importantly, CLARION was the first psychological model that proposed an explanation for the "bottom-up learning" mechanisms present in human skill acquisition: His ...
