Elastomeric Materials Hem Thermoplastic elastomers such as SIS and SBS block copolymers and certain urethanes are thermoplastic and contain rigid (hard) and soft (rubbery) repeat units. Elastomers Elastomers are usually thermosets but may also be thermoplastic. The long polymer chains cross-link during curing, i.e., vulcanizing.

Elastomeric Materials Hem - cdnx.truyenyy.com

An elastomer is a polymer with viscoelasticity (i.e., both viscosity and elasticity) and has very weak intermolecular forces, generally low Young's modulus and high failure strain compared with other materials. The term, a portmanteau of elastic polymer, is often used interchangeably with rubber, although the latter is preferred when referring to vulcanisates.

Elastomer - Wikipedia

Elastomeric fibers include the crosslinked natural and synthetic rubbers, spandex fibers (segmented polyurethanes), anidex fibers (crosslinked polyacrylates) and the side-by-side biconstituent fiber of nylon and spandex (Monvelle). The fibers are all used in specialized applications where high elasticity is necessary within the textile structure.

Rubber and elastomer are words commonly used to mean any material with rubber-like properties. Elastomer is shorthand for elastic polymer. Elastomers are viscoelastic: sticky, very elastic polymers (plastics). Natural rubber is an elastomer made from latex, a milky tree sap.

Elastomers and Rubbers - Is There a Difference? | ISM

Elastomeric refers to the rubber-like properties of a polymer, i.e., a material being able to regain its original shape when a load is removed from the material. It is related to having the properties of elastomers. Materials possessing elastomeric properties include both natural and synthetic rubber, urethane, polyurea and polymeric coatings.

What is an Elastomeric? - Definition from Corrosionpedia

Elastomer materials are those materials that are made of polymers that are joined by chemical bonds, acquiring a final slightly crosslinked structure.

Elastomer - Definition and examples of elastomer

Elastomeric coatings or acrylic resin coatings fall in the category of latex paints because they have a milky color when wet, and after drying they become flexible, stretchable and have a clear appearance. An elastomeric coating may also be known as a latex coating or an acrylic latex. Corrosionpedia explains Elastomeric Coating

Polyurethanes take about a minute or more to recover. Yet another common way to bond hems, typically in outer garments like dresses and trousers, is to spread fine particles of material, usually known as hot melt adhesive, inside the hem. The hem is then ironed, melting the particles, which become “bonding points” holding the hem.
