Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (v_f), and initial velocity (v_i). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...

Kinematic Equations: Sample Problems and Solutions

Motion energy is the sum of potential and kinetic energy in an object that is used to do work. Work is when a force acts on an object and causes it to move, change shape, displace, or do something physical. Potential energy is energy that is stored in an object or substance. Kinetic energy is the energy of a moving object.
