Telemetry and Data Transmission Data at SNOTEL, Snolite, and SCAN sites are collected and stored by a datalogger installed in the equipment shelter or enclosure. Depending on the location of the site, data are transmitted back to the Water and Climate Information System using one of the following telemetry systems.

Telemetry and Data Transmission - USDA

Telemetry is the automatic recording and transmission of data from remote or inaccessible sources to an IT system in a different location for monitoring and analysis. Telemetry data may be relayed using radio, infrared, ultrasonic, GSM, satellite or cable, depending on the application (telemetry is not only used in software development, but also in meteorology, intelligence, medicine, and other fields).

What Is Telemetry? How Telemetry Works, Benefits of ...

Telemetry is the in situ collection of measurements or other data at remote points and their automatic transmission to receiving equipment for monitoring. The word is derived from the Greek roots tele, "remote", and metron, "measure". Systems that need external instructions and data to operate require the counterpart of telemetry, telecommand. Although the term commonly refers to wireless data transfer mechanisms, it also encompasses data transferred over other media such as a telephone or compu

Telemetry, highly automated communications process by which measurements are made and other data collected at remote or inaccessible points and transmitted to receiving equipment for monitoring, display, and recording. Originally, the information was sent over wires, but modern telemetry more commonly uses radio transmission.

Telemetry | communications | Britannica

Telemetry is the automatic measurement and wireless transmission of data from remote sources. In general, telemetry works in the following way: Sensors at the source measure either electrical data (such as voltage or current) or physical data (such as temperature or pressure). These measurements are converted to specific electrical voltages.

What is telemetry? - Definition from WhatIs.com

Telemetry is a data acquisition technology that allows for the remote recording, transmission, and reporting of information. The process is primarily accomplished through the use of a telemetry unit (or telemetry system) that communicates wirelessly through a category of software known as SCADA (more on this shortly).
