13.2 ARCHITECTURE OF A SATELLITE COMMUNICATION SYSTEM. As discussed in Chapter 3, "Transmission Media", satellite communication systems operate in two configurations: (a) mesh; and (b) star. In mesh configuration, two satellite terminals communicate directly with each other. In star configuration, there will be a central station (called a hub), and remote stations communicate via the hub.

Electronic Circuits and Systems. The electromagnetic field generated when an alternating current is input to an antenna is called an RF field or radio wave. Ranging from a frequency of about 9 kilohertz (kHz) up to thousands of gigahertz (GHz), the RF spectrum is used by many types of everyday devices — radio, television, cordless and cellular telephones, satellite communication systems, and many measuring and instrumentation systems used in manufacturing.
