### **Nitrate Lab Essay - 1020 Words**

Copper is more reactive than silver. When copper reacts with  $\text{AgNO}_3$  (Silver nitrate), Cu (Copper) displaces Ag (Silver) from  $\text{AgNO}_3$  (Silver nitrate) solution, and form  $\text{Cu}(\text{NO}_3)_2$  (Copper nitrate) The Copper Nitrate formed is blue in color. It's a displacement reaction as well as redox reaction.

### **What happens when Copper reacts with Silver nitrate ...**

Hypothesis: /3 If the copper metal is submerged in the silver nitrate solution then in reaction, a pure, solid (Ag) silver product is created with an excess of  $\text{Cu}(\text{NO}_3)_2$  copper (II) aqueous liquid because a single displacement reaction

occurs where the balance equation is then  $2\text{AgNO}_3 + \text{Cu}(\text{s}) \rightarrow 2\text{Ag} + \text{Cu}(\text{NO}_3)_2$  III.

Using distilled water, rise the coil and then allow it to dry. Weigh and record it's mass. Decant the solution (pour it off) into a waste beaker. Add 10 to 15 mL of distilled water to the silver then decant again. Repeat this wash and decant process about three times. Obtain a piece of copper wire about 20 cm long.

### **Silver Nitrate and Copper Lab Report by Justin Peralta**

Subtract the initial mass of the copper wire (4.54g) from the mass of the leftover copper wire (4.18g) to

get the mass of copper wire that reacted in the experiment. To then calculate the moles of copper wire reacted take the mass of copper that reacted and multiply it by copper's mole to mass ratio (1mol/63.55g). 2.

**Copper and Silver Nitrate Lab Post Questions.docx - Post ...**

Dropping copper wire into the silver nitrate solution initiates a redox reaction between the silver ion and copper metal. The silver is reduced to elemental silver and the copper is oxidized to copper (II):  $\text{Cu (0)} + 2\text{AgNO}_3 = \text{Cu (NO}_3)_2 + 2\text{Ag (0)}$

**Chemistry Lab Demonstrations: Silver Nitrate/Copper Wire**

...

By Jessica Clifton. One of the most fascinating chemical experiments is the reaction between silver nitrate and copper wire in water. Characterised by fractal-like precipitates, this experiment is a stunning example of a simple redox reaction. When you place a copper wire into a solution of silver nitrate and water, crystals begin to appear.

**What Happens When You Put Copper Wire in Silver Nitrate?**

The new substance that appeared in the test tube during the reaction of copper and silver nitrate was a silverish metallic looking substance. The chemical formula for the substance would

be  $\text{Cu} + 2\text{AgNO}_3 = \text{Cu}(\text{NO}_3)_2 + 2\text{Ag}$ . (This is if we assume the substance is silver or Ag.) 3.

### **Assignment: Hands-On Labs - Writing Professors**

Silver nitrate ( $\text{AgNO}_3$ ) reacts with copper ( $\text{Cu}$ ) to form copper (II) nitrate ( $\text{Cu}(\text{NO}_3)_2$ ) and silver ( $\text{Ag}$ ). This can be called a redox reaction because silver nitrate is reduced and copper is oxidized. This can also be called a single replacement reaction because copper replaces silver in the substance silver nitrate.

The reaction of copper wire with silver nitrate in aqueous solution shows chemistry in action. Silver crystals grow on the wire surface, and the color of copper (II) ions appears in solution. Students measure the mass of the silver produced, determine the mass of copper wire that reacted and calculate the number of moles of each.
