Non Linear Optical Properties Of

The nonlinear optical properties of semiconductors are mostly of an electronic nature. Near the electronic band gap, absorption saturation leads to a strong negative optical nonlinearity. The response time of the nonlinearity, however, is relatively long, as its mechanism is based on real electronic transitions with quite slow decay rates ($\sim ns$ – 1).

Nonlinear Optical Property - an overview | ScienceDirect ...

Nonlinear optics is the branch of optics that describes the behaviour of light in nonlinear media, that is, media in which the polarization density P responds non-linearly to the electric field E of the light. The non-linearity is typically observed only at very high light intensities such as those provided by lasers. Above the Schwinger limit, the vacuum itself is expected to become nonlinear. In nonlinear optics, the superposition principle no longer holds.
