Patient Administration System — PatientSource

A system administrator, or sysadmin, is a person who is responsible for the upkeep, configuration, and reliable operation of computer systems; especially multi-user computers, such as

servers. The system administrator seeks to ensure that the uptime, performance, resources, and security of the computers they manage meet the needs of the users, without exceeding a set budget when doing so. To meet these needs, a system administrator may acquire, install, or upgrade computer components and software.

System administrator - Wikipedia

This section, intended mainly to M-Files system administrators, explains how to manage, maintain, and configure the M-Files system. M-Files clients (on the left) are used for accessing M-Files

Server (in the center), which manages the document vaults (on the right). The first subsection, Setting Up and Maintaining M-Files, introduces the M-Files system, provides instructions for installing and upgrading the system, and explains how server connections and document vaults are managed.
