 Chapter 6 Categorical data So far, we've focused on analyzing
 numerical data. This section focuses on data that's categorical
 (e.g., with values like 'red' or 'blue' that don't have any ordering).
 We'll start with the case where both the inputs and the outputs
 are categorical, then discuss categorical inputs with numerical
 outputs.

Probability Distributions for Categorical Data The binomial distribution (and its multinomial distribution generalization) plays the role that the normal distribution does for continuous response. Binomial Distribution • n Bernoulli trials - two possible outcomes for each (success, failure) • $\pi = P(\text{success})$, $1 - \pi = P(\text{failure})$ for each trial

Categorical Data Analysis Lecture September 10, 2012

This book offers a relatively self-contained presentation of the fundamental results in categorical data analysis, which plays a central role among the statistical techniques applied in the social, political and behavioral sciences, as well as in marketing and medical and biological research. The methods applied are mainly

aimed at understanding the structure of associations among variables and the effects of other variables on these interactions.

STAT 8620, Categorical Data Analysis & Generalized Linear Models — Lecture Notes. The goal of this course is to teach methods for the analysis of discrete response data and to develop a general framework for the analysis of discrete data and other data types for which the assumptions of the classical linear model (CLM) do not hold. Such a framework is provided by a class of models known as generalized linear models or GLMs.

STAT 8620, Categorical Data Analysis & Generalized Linear ...

The basics of categorical data analysis are covered in Chapters 1–8. Chapter 2 surveys standard descriptive and inferential methods for contingency tables, such as odds ratios, tests of independence, and conditional vs marginal associations.

Introduction to Categorical Data Analysis

counts are categorical data. A categorical variable is measured on a scale that is nominal (eg – religion) or ordinal (eg – diagnosis coded as “benign”, “suspicious”, or “malignant”). Unit 4 (Categorical Data Analysis) is an introduction to some basic methods for the analysis of categorical data: (1) association in a 2x2 table; (2) variation of a 2x2 table
