Introduction to Surface Texture. Since the first roughness meters appeared at the beginning of the 1930s, the measurement of surface texture has been based on 2D profilometry and contact gauges, at least until the last two decades. One had to wait until the beginning of the 1980s to see the appearance of instruments for measuring surface areas, such as white light interferometers and 3D profilometers [WHITEHOUSE 2011].

The nature of surface texture is based on the lateral wavelength of irregularities. Geometrical form and form errors are excluded from surface texture, leaving three components: primary profile, roughness profile and waviness profile, each separated by filters. Roughness is by far the most common surface characteristic, having an important impact on surface functions such as wear or friction.
