to replace an old queen with a younger one to reduce the swarming impulse; to exchange a failing queen with a vigorous one to prevent a failed colony. Large scale queen rearing is central to the process of royal jelly production. Breeding bees is about the process of deliberate selection of certain characteristics. For example, beekeepers commonly try to breed bees which are very productive or very gentle. Breeding involves

manipulation of both queen and drone populations.

Bees for development | Rearing and breeding bees

In most queen rearing methods, you cannot allow new queens to develop in the presence of a current queen or other developing queens, because they will kill each other in order to rule the hive. Extra nucs of queenless worker bees are beneficial in some of the methods used for rearing queens because the grafted or developed queen cell can be placed in a nuc with nurse bees to feed her and help her develop.
