Spheroids Rapidly Becoming a Preferred 3D Cell Culture Format. By Dr John Comley. There are many advantages associated with culturing cells in three-dimensional (3D) versus conventional two-dimensional (2D) tissue culture. Scaffold-free 3D cell culture systems that generate spheroids (and other similar multicellular aggregations) have proved useful as they offer an easy route to access 3D cell culture and transition into plate-based higher throughput.

Introduction. We have previously described the automated plating, treatment, and analysis of 3D spheroids formed in hanging drop plates (see Automated 3D Cell Culture and Screening by Imaging and Flow Cytometry, AAG-788APP02.15-A). These organoids (Figure 1) have more biologically-relevant levels of cell-cell interactions than monolayer cultures and can better represent the diffusion gradients that would be seen by a solid organ or tumor.
