In concentrated sunlight-H 2 conversion, the capacity to do work appears as H 2 productivity. In the present work, the H 2 productivity increases linearly as the sunlight is concentrated to 3–15 suns. The primary cause for such linear promotion is the densified charge carrier flow and localized surface heating under the solar concentration.

Photovoltaics is the direct conversion of light into electricity at the atomic level. Some materials exhibit a property known as the photoelectric effect that causes them to absorb photons of light and release electrons. When these free electrons are captured, an electric current results that can be used as electricity.

Photovoltaic Conversion Of Concentrated Sunlight
A photovoltaic system, also PV system or solar power system, is a power system designed to supply usable solar power by means of photovoltaics.It consists of an arrangement of several components, including solar panels to absorb and convert sunlight into electricity, a solar inverter to convert the output from direct to alternating current, as well as mounting, cabling, and other electrical ...

Photovoltaic system - Wikipedia
Concentrated solar power systems use lenses or mirrors and solar tracking systems to focus a large area of sunlight into a small beam. Photovoltaic cells convert light into an electric current using the photovoltaic effect. Photovoltaics were initially solely used as a source of electricity for small and medium-sized applications, from the calculator powered by a single solar cell to remote homes powered by an off-grid rooftop PV system. Commercial concentrated solar power plants were first ...
