Steel to concrete connection detailing is a tricky business. All too often multiple methods are needed to design the different elements in a single connection which increases the time taken for the connection's design. This in turn affects an engineer's productivity. This might seem antiquated in a world of complex designs, BIM and integrated software, but these are the findings of a recent New Civil Engineer survey into connections and fixings.

Types of simple connections. Simple connections are nominally pinned connections that are assumed to transmit end shear only and to have negligible resistance to rotation. Therefore do not transfer significant moments at the ultimate limit state. This definition underlies the design of multi-storey braced frames in the UK designed as 'simple construction', in which the beams are designed as ...
