Calcium and Magnesium is removed using pretreatment such as lime-soda softening and filtration, prior to feeding the RO. Weak acid cation ion exchange is used to remove hardness associated with alkalinity. Hydrogen ions released in the cation exchange reaction react with alkalinity to form carbonic acid for subsequent removal in the degasifier.

Pretreatment for Membrane Processes

Reverse osmosis (RO) is a filtration method that removes many types of large molecules and ions from solutions by applying pressure to the solution when it is on one side of a selective membrane. The result is that the solute is retained on the pressurized side of the membrane and the pure solvent is allowed to pass to the other side.
