Viruses and Demyelinating Diseases - PubMed Central (PMC)

There are several demyelinating diseases: Multiple Sclerosis (MS) This is the most common demyelinating disorder. One in 500 people have it.

Demyelinating Disorders: Types, Causers, Symptoms, Treatments

The 17 contributions are derived from a symposium of the Multiple Sclerosis Society, held at Edinburgh in September 1982. Apart from multiple sclerosis, subjects dealt with include the roles of paramyxoviruses (such as distemper virus), coronaviruses (murine viruses), reoviruses and herpesviruses in nervous system diseases. There are also two papers on visna in sheep, by N. Nathanson et al. and...

Viruses And Demyelinating Diseases

Several animal and human demyelinating diseases of the central nervous system (CNS) are associated with RNA or DNA viruses. These viruses infect CNS cells lytically or persistently. They mainly belong to the group of envelope viruses which derive their envelope partly from the host cell membrane.

The NMO (NMO) or Devic disease is a demyelinating disease that affects the central nervous system (Cleveland Clinic, 2015). Specifically, optic neuromyelitis causes a loss of myelin in the optic nerves and in the spinal cord (Cleveland Clinic, 2015). Is neuromyelitis optica a frequent pathology?

The 4 Most Common Demyelinating Diseases | Its Psychology

While some viruses may cause widespread inflammation and neurodegeneration, other viruses may remain latent in the CNS and only produce pathological changes during reactivation. Viral induced demyelination can occur both from direct infection of the myelin-producing oligodendrocytes, as in PML, or by indirect mechanisms that have yet to be determined.

Infectious Demyelinating Diseases — Johns Hopkins University

Progressive multifocal leuukoencephalopathy (PML): This is a severe demyelinating disease that occurs due to reactivation of a virus (JC virus). Most people have been exposed to this virus, which can cause a mild cold.

Demyelination: Symptoms, Causes, Diagnosis, Treatment

Demyelinating disease is characteristically scattered throughout the brain and spinal cord, with small foci where the myelin is destroyed and replaced with glial scar tissue. Nerve fibres running through such areas may remain undamaged, but the lack of insulation normally provided by the myelin leads to a blockage of conduction of electrical impulses.

Nervous system disease - Infections | Britannica

Hypoxic-ischemic demyelination occurs due to vascular disease or a lack of oxygen in the brain. Demyelination and multiple sclerosis MS is the most common demyelinating condition.

Demyelination: What Is It and Why Does It Happen?

The possible role of a virus or viruses is supported by data that (1) a childhood exposure is involved

and 'viral' infections may precipitate exacerbations of disease, (2) experimental infections in animals and natural infections in humans can cause diseases with long incubation periods, remitting and relapsing courses, and demyelination, and (3) patients with multiple sclerosis have abnormal immune responses to viruses.

The virology of demyelinating diseases — Johns Hopkins ...

Establishment of the etiology of MS may allow for more earlier, more specific, and less toxic treatment. In this paper we will review the epidemiologic evidence for a viral etiology of MS, the current state of candidate viruses, viral associated human demyelinating diseases other than MS, and the animal models of viral-induced demyelination.

Viruses And Demyelination | SpringerLink

Abstract. Canine distemper virus (CDV) causes severe immunosuppression and neurological disease in dogs, associated with demyelination, and is a model for multiple sclerosis in man. In the early stage of the infection, demyelination is associated with viral replication in the white matter. In acute demyelinating lesions there is massive down-regulation of myelin transcription and metabolic impairment of the myelin-producing cells, but there is no evidence that these cells are undergoing ...
