In particle physics, the Dirac equation is a relativistic wave equation derived by British physicist Paul Dirac in 1928. In its free form, or including electromagnetic interactions, it describes all spin-1 / 2 massive particles such as electrons and quarks for which parity is a symmetry. It is consistent with both the principles of

quantum mechanics and the theory of special relativity, and was ...

Quantum Theory, Lecture 21:

Relativistic Quantum Mechanics. The Need for Quantum Field Theory.

In classical relativistic mechanics the interaction of a particle carrying charge q in an external electromagnetic field can be obtained by substituting the momentum as $p_\mu \rightarrow p_\mu + qA_\mu$, (2.121) where A_μ is the 4-vector potential $A_\mu \equiv (A_0, A_{\sim}) = (\phi, A_{\sim})$ (2.122) with ϕ the scalar potential and $A_{\sim}$ the vector potential.

(34.22) The first three terms represent the correct relativistic expression, provided a $j = 1$ and $2 = 1$. In order to get rid of the

remaining terms, we must have a $k_a + a_j = 0$ and $k_b + a_j = 0$: (34.23) If we can do that, then we will have a relativistic theory.
