Circular Dichroism: Principles and Applications | Request PDF

Circular dichroism is dichroism involving circularly polarized light, i.e., the differential absorption of left- and right-handed light. Left-hand circular and right-hand circular polarized light represent two possible spin angular momentum states for a photon, and so circular dichroism is also referred to as dichroism for spin angular momentum. This phenomenon was discovered by Jean-Baptiste Biot, Augustin Fresnel, and Aimé Cotton in the first half of the 19th century. Circular dichroism ...

Circular dichroism - Wikipedia

Circular Dichroism (CD), which is the difference in the absorption of left-handed circularly polarized light and right-handed circularly polarized light that arise due to structural asymmetry, is the technique used for analyzing secondary and tertiary structures and folding properties of proteins in solutions, which could be changed due to its environmental changes such as temperature or pH.

Circular Dichroism - an overview | ScienceDirect Topics

Circular dichroism (CD) deals with the interaction of plane polarized light (PPL) with an asymmetric molecule with subsequent differential absorption of left and right circularly polarized light components of PPL and it aims to explain structural features of biomolecules with empirical rules devised on the basis of the study of such interactions between PPL and model compounds whose detailed structure is well known.
