Rapid prototyping Control Systems Design: Conceptual ...

Rapid Control Prototyping (RCP) is a test and development methodology used to accelerate the design process by using model-based design to test a control strategy on physical hardware early in the design process. Early proof of concept One of the key benefits of RCP is the ability to prove out a control algorithm early in the design process.

Rapid prototyping design systems can
be categorised as being formative or
summative. Formative systems alternate
cycles of design and testing to refine the
product. This can result in a higher
quality product, but it can be a more
expensive and time-consuming exercise.

Rapid Prototyping applies an iterative approach to the design stage of an app or website. The objective is to quickly improve the design using regularly updated prototypes and multiple short

cycles. This saves time and money by solving common design issues before development begins, helps businesses to

reach market quicker, and puts the focus of development on the needs of the end-user.
