Entity Framework Fluent API is used to configure domain classes to override conventions. EF Fluent API is based on a Fluent API design pattern (a.k.a Fluent Interface) where the result is formulated by method chaining . In

Entity Framework Core, the modelBuilder class acts as a Fluent API. By using it, we can configure many different things, as it provides more configuration options than data annotation attributes.

Fluent API in Entity Framework Core

Fluent API is another way to configure your domain classes. The Code First Fluent API is most commonly accessed by overriding the OnModelCreating method on your derived DbContext. Fluent API provides more functionality for configuration than DataAnnotations. Fluent API supports the following types of mappings.

Entity Framework - Fluent API -
