Gadolinium Containing Mri Contrast Agents
Millions of doses of gadolinium-based contrast agents (GBCAs) are administered annually to improve the clinical utility of magnetic resonance imaging. All the approved agents incorporate one atom of the rare earth metal gadolinium into a chelate to improve the safety of the ordinarily toxic free gadolinium.

Gadolinium-Containing MRI Contrast Agents: Important ...
On 20 July 2017, the European Medicines Agency (EMA) concluded its review of gadolinium contrast

agents, confirming recommendations to restrict the use of some linear gadolinium agents used in MRI body scans and to suspend the authorisations of others. The recommendations – confirmed by EMA's Committee for Medicinal Products for Human Use (CHMP) – followed a review that found that gadolinium deposition occurs in brain tissues following use of gadolinium contrast agents.

MRI contrast agent - Wikipedia

Gadolinium-based contrast agents can be divided into different categories: linear versus macrocyclic structure, ionic versus nonionic, and non-protein-binding versus protein-binding agents. The GBCAs differ significantly with respect to transmetallation and kinetic and thermodynamic stability and therefore their propensity to release free gadolinium, which is hypothesized to induce NSF.
