Mixed models (for continuous data) are a class of models which contain

parameters or effects of two types: • “fixed”, like ordinary regression coefficients, • “random”, referring to the stochastic part of the model (beyond the usual error term) Although not strictly logical, the term random effects models is usually used to denote such models with both types of effects.

Notes on Linear Mixed Models

MODULE 9. Linear Mixed Effects Modeling. 1. Mixed Effects Models. Mixed effects models refer to a variety of models which have as a key feature both fixed and random effects. The distinction between fixed and random effects is a murky one. As pointed out by Gelman (2005), there are several, often conflicting, definitions of fixed effects as well as definitions of random effects.
